They Bay Tar Pa An District Karen State

Tokawko Pa An District- Karen State

Dee Bu Noe clinic Mutraw District Karen State

Bang Klang FBR Clinic Du Plaryar District Karen State

K1 Do The Tue

K3 Kler Lwe Too clinics

K4 (Anywhere- no specific clinic)

**Proposed period of activity:**

*Feb, 2016 to 30 Feb, 2017*

## 1. Brief Situation Analysis

I would like to make a request to all my friends who might be interested in helping our Karen people who are Internally Displaced People with medical assistance, particularly for eye operations. We do have an eye operation process on the Thai Burma border, but in the displaced people area, there are many health issues that need your support. Your financial support will be of huge benefit to the community who desperately need basic medical assistance.

As a medical health worker, I have been trained to perform high quality eye surgery, particularly cataract removal with artificial lens implants. I am well equipped with an operating microscope but need a constant supply of consumables. I often go to remote areas in Burma and provide medical assistance, including eye operations for the community. During my mission, the challenge that we are confronting, is lack of eye operation materials and equipment to perform the number of operations required for the many people in need.

We would like to assist them as much as we can, particularly with eye operations. I request your support to help our disadvantaged community to obtain basic medical needs. We would be very appreciative if you could provide some financial support to our community, as your support could bring a change to the situation of their health and wellbeing. I hope that you can also request financial assistance from your family, friends, colleagues and community for this very worthy cause. Details about how you can contribute are contained in this pack. Thanking you very much in advance for your generosity.

Number of Cataract operations performed by Nay Hser

2008	13 patient
2009	109 patient
2010	79 patient
2011	294 patient
2012	343 patient
2013	559 patient
2014	845 patient
2015	805 patient
