

## KAREN COMMUNITY EYE HEALTHY CARE PROGRAM Kaw Htoo Lei

### Karen state District Eye operation Report 2018 (January to June)

#### **1.Introduction**

In 2018 we after looking for after the health of the eye in the Karen state district, township, and jungle village. the Karen community eye health care program have been guided by the state major, village leader and the community health worker leader.

In our finding we have discovered that many of our patient have eye problems, they do not have the money for treatment and transportation, to go to the centre hospital that is why we have set up treatment programs in our state.

In 2018 in our finding we have found out that, many of the community have developed interest and we have been getting more patients partly because we do the operation for free.

#### **(2) Strong points**

- We have very good cooperation with district leaders. and health care leaders.
- The patients are happy and arriving on time when they hear our eye operation.

#### **(3) weak points**

- Communicating to the state leader and other village leader are difficult because of the distance in location.
- The patient have some a difficult time getting to come are there is no one to help them because far from the village.

--**We need more supporting more donation for eye activity in Karen state (for your love).**
